

A Collection of Abstracts in Chinese and English Version from the Achievement Reports of TCM Research Program 2008

Introduction

Chinese medicine is an important cultural asset of Chinese people. It has thousands of years of experiential history and has been widely used to cooperate with scientific developments of modern medicine. The Committee endeavors to strengthen the modernization of Chinese medicine and scientific and empirical-based Chinese medicine research and development in order to build a communication platform with Western medicine, and by the research results of scientific evidence to drive the innovative development of the Chinese medicine business.

Over the years, the research project of this Committee will focus on cooperating with the medium-term and long-term work objectives planned by the Committee and needs of various businesses of Chinese medicine doctors and Chinese medicine. In addition, based on the idea of "Traditional Chinese Medicine Modernization and Internationalization", we cooperate with the Executive Yuan's "National Research Program for Genomic Medicine- Traditional Chinese Medicine genomics-related

research” to integrate and plan. Respectively through the predecessors’ guidance and support of National Chinese and Western medicine and the people of the Chinese medicine industry, we develop evidence-based Chinese medicine research and handle domestic and international academic and cross-strait exchanges of Chinese medicine, cooperation and personnel training of Chinese and Western medicine, Chinese medicine clinical trial environment and deployment and promotion of the laws and regulations, and other programs. In the future, we will focus more on the evaluation and quality control studies of diseases with Chinese medicine curative effects and clinically curative effects of common prescriptions, and we will combine with modern technology to promote the cooperation of Chinese and Western medical care as soon as possible for another opportunity for the treatment of human diseases.

To help the community to understand the situations of outcome application of the Committee’s Chinese medicine research and development projects and implement research results to share with all people, we arrange, plan, and print the Chinese and English summaries of every plan host as a reference for the industry, academy, and research fields. The smooth publication of this compilation should be attributed to 129 academic units, the research program hosts who implement the research projects assigned by the Committee, and related academic research institutes, so we specially express our thanks and please be so kind as to give us replies continually.
